## Motivation of the Project (Not exceeding 100 Words) \*

Monitoring the attendance of students is one of the major concerns in many educational institutions. The manual management of the attendance sheets is time consuming. We found this problem in many universities . We want to find a reliable system which identifies which student is present in the classroom and gives the attendance based on his presence . This system must not be complex. It should exhibit minimum interaction between the student and the attendance monitoring system.

Justify your Project for Societal Application (Not exceeding 100 Words) \*

Developing a project that makes easy for the students and also the management to take care of their attendance saves time for them. So the saved time can be utilized for doing something useful. In a classroom this saved time can be used to give the students a little time to get ready for the present class and so they can learn efficiently.

Abstract with Keywords in the given format - Refer the format in GCR (Not exceeding 500 Words) \*

 BATCH\_18\_ABST... 

Upload the Powerpoint Presentation \*
